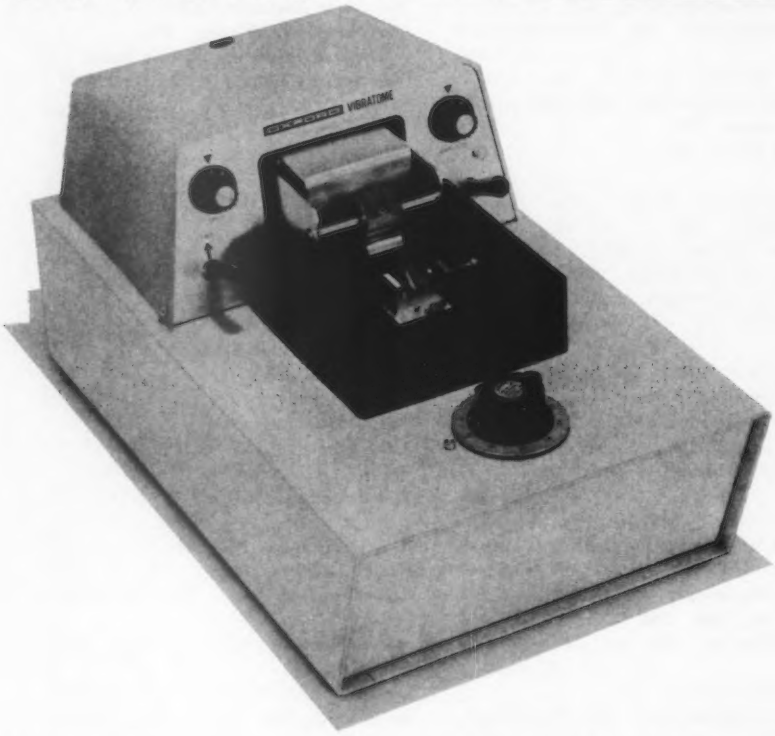
THE MODEL G

VIBRATOME®

OXFORD LABORATORIES



New, Low-Cost Breakthrough In Fresh Tissue Sectioning

New, from Oxford, this economical, light, compact, versatile machine sections even delicate, fresh tissue without embedding or freezing.

By employing a vibrating blade principle, it distributes the cutting force laterally, thus permitting sectioning without distortion. This is accomplished in a liquid bath which lubricates the blade, prevents heat build-up and facilitates retrieval of the sections.

Soundly engineered throughout, the Vibratome® achieves optimum results with a variety of specimens.

Announcement: The 4th International Congress of Histochemistry & Cytochemistry 185
The 5th International Congress of Histochemistry & Cytochemistry 185

No. 4, 1972

Proceedings of the US-Japan Seminar on Application of Cytochemistry to the Studies of Cell Function,
Oiso, Kanagawa, Japan, August 28–31, 1972
Organized by K. Ogawa and R. J. Barrnett
Topics of sessions:
Topic 1. Autoradiography 195
Topic 2. Immunocytochemistry 214
Topic 3. Cytochemistry of Cellular Membranes
1. Fixation on Cellular Membranes in Relation to Membrane Structure and Composition 230
Topic 4. Cytochemistry of Cellular Membranes
2. Biosynthesis and Membrane Specialization 249
Topic 5. Cytochemistry of Cellular Uptake and Protein Synthesis 266
